Clinical Note — Office Visit 10/29/2026

Patient: Taylor Brooks DOB 11/19/1990

History

35-year-old with band-like headaches 2–3 times a week for 6 months, worse with stress and long screen time. Relieved by ibuprofen. No change in pattern.

Red flags

No sudden 'worst headache', no new neurological symptoms, no seizures, no fever, no cancer history, no head trauma. Not pregnant. Age under 50.

Exam

Neurological exam normal, including fundi, cranial nerves, strength and gait.
Mild tenderness of neck and shoulder muscles.

Assessment / Plan

Chronic tension-type headache. Patient anxious and requests MRI.
Discussed headache diary, sleep, posture and a trial of preventive therapy.
